

WE CAN HELP PREVENT THIS FROM HAPPENING TO YOUR HOME

Our new high technology rot-detection equipment can find dangerously rotting trees that threaten your home and family.

Appearances Can Be Deceiving

As surely as trees grow up they will someday come down. The cause of this is often decay started by insect and disease damage. Infected trees may look perfectly healthy but when enough wood is affected it doesn't take a full-blown hurricane to bring

one down. An untimely gust is often sufficient. Homeowners concerned about the health and strength of certain trees close to their living space can now call Conserv-A-Tree to have the inside 'support' wood of those trees tested for dangerous rot.
